Government of Meghalaya

CLIMATE ACTION BUDGET FY 2023-24

FINANCE DEPARTMENT
GOVERNMENT OF MECHALAYA

Executive Summary

Meghalaya, with about 76% of its area under forest is rich in biodiversity as it is in a biological hotspot region of eastern Himalayas. The State is mostly mountainous with stretches of valley and highland plateaus. With the State economy's high dependance on agriculture instead of industries and due to the hydro power generation and nature of the industrial sectors situated in the State, Meghalaya is on the lower side of the per capita emission of Greenhouse Gases compared to its counterparts. Some of the carbon emission intensive industries with a significant contribution to the Meghalaya state's GHG emissions are Cement and Ferro Alloys (56% of overall emissions).

Understanding that climate change is a global issue that affects all aspects of human society, including health, agriculture, economics, and politics and that effective climate action is crucial to address the challenge of climate change and prevent its most severe impacts, the State of Meghalaya has constituted the **Meghalaya State Council on Climate Change & Sustainable Development** -an apex body for coordinating and approving climate change related work, and publishes its first **Climate Action Budget**.

The Climate Action Budget was prepared to integrate climate action into the State's budgeting process ensuring the use of public resources effectively and efficiently, to address one of the most significant challenges facing society today. The climate action budget can also increase transparency and accountability, as Government reports on the effectiveness of its climate-related spending and adjust its plans as needed to meet the climate goals. The total budget allocated to climate action for Meghalaya has increased from Rs 2,456.23 crores in 2022-23 to Rs 3,411.93 crore in 2023-24 (budget estimates) constituting **15.36%** of the total State Budget for the FY 2023-24.

Understanding that the people of Meghalaya have an intricate relationship with nature and their reliance on natural resources for livelihood, the State is taking steps in engaging its community through, knowledge building on sustainable natural resource management, improved livelihood and institutional strengthening thereby contributing to the conservation of the environment, biodiversity and uplifting the socio- economic condition of the people of the State.

1. Introduction

1.1 Background

Meghalaya is located in a biological hotspot region of eastern Himalayas and is one of the seven sister states situated in North-East India. The State of Meghalaya is mostly mountainous with stretches of valley and highland plateaus. It has about 76% of its area under forest and is rich in biodiversity. The state also has several mineral deposits in the form of limestone, coal and others.

The state's area largely comprises of tablelands and hill regions that is heavily forested and with several rivers that pass through the state. It is an abode of tremendous biodiversity, and the soil and climate are conducive to the cultivation of a large variety of agricultural crops, horticultural produce, and flowers. Meghalaya is blessed with abundant natural resources such as forests, mineral resources, agriculture lands, flora and fauna and has forest area of more than 17,000 km², which constitutes around 76% of overall geographic area of the state.¹ Because of the favorable geographic location, mineral resources and availability of agriculture lands, the state's economy has been mainly dependent on agriculture and forestry. Over the past few years, the state has also attracted investment in industrial sectors – cement and Ferro alloys.

As per the Carbon Footprint Study for the State of Meghalaya, the State's per capital emission is lower due to the State economy's high dependence on Agriculture, hydro power and nature of the industrial sector situated in the State. Some of the carbon emission intensive industries with a significant contribution to the Meghalaya state's GHG emissions are Cement and Ferro Alloys (56% of overall emissions). These sectors utilize high amount fossil fuel and have process emissions and thus have contributed to higher per capita emission for the state.²

Historically, the people of Meghalaya have always had an intricate relationship with nature. This is evident from their Mariangiing or nature homes, the bamboo drip irrigation system and root bridges, to name a few, which are inspired by indigenous learning methods rooted in the community. These have significant contribution in increase in tourist footfalls in the State leading to a need for increased engagement of community for the management of natural resources.

1.2 Need for Climate Action

Climate change refers to long-term changes in the Earth's climate, particularly those caused by human activities such as the burning of fossil fuels and deforestation. These activities have led to an increase in the concentration of greenhouse gases in the atmosphere, which trap heat and cause global temperatures to rise also leading to changing weather patterns and extreme climate. Climate change is a global issue that affects all aspects of human society, including health, agriculture, economics, and politics.

¹ <https://fsi.nic.in/isfr19/vol2/isfr-2019-vol-ii-meghalaya.pdf>

² <https://meghalayacc.org/wp-content/uploads/2019/03/Carbon-Footprint-Meghalaya-Report.pdf>

Effective climate action is crucial to address the challenge of climate change and prevent its most severe impacts. SDG 13- climate action, calls to taking urgent action to tackle climate change and transition to a more sustainable and resilient future. With Meghalaya's economy closely tied to its natural-resource-base and climate-sensitive sectors such as agriculture, water, and forestry, climate change as projected might result in increasing mean annual temperature, variability of rainfall pattern and seasonal shift in weather pattern which is likely to result into destructive effect on the agriculture, the mainstay vocation in the state.³

1.3 Effects of Climate Change on Meghalaya

Climate change is expected to have significant impact on the state of Meghalaya. Some of the potential areas of impact include:

- **Increased frequency and intensity of extreme weather events:** Meghalaya is already prone to floods, landslides, and droughts. Climate change is expected to exacerbate these problems, leading to more frequent and severe disasters.
- **Changes in precipitation patterns:** Meghalaya is known for its heavy rainfall, which is essential for the region's agriculture and biodiversity. Climate change is expected to alter rainfall patterns, with some areas experiencing more intense rainfall while others experience drought.
- **Rising temperatures:** Climate change is expected to lead to higher temperatures in Meghalaya, which could affect the state's ecosystems and agriculture. It could also increase the incidence of heat-related illnesses and other health problems.
- **Loss of biodiversity:** Meghalaya is home to a rich array of plant and animal species, many of which are unique to the region. Climate change could disrupt ecosystems, leading to the loss of species and changes in the distribution of plant and animal communities.
- **Impact on agriculture:** Meghalaya's economy is heavily dependent on agriculture, which is vulnerable to changes in precipitation patterns and temperature. Climate change could lead to reduced crop yields and increased pest and disease pressures, among other impacts.

Overall, the impact of climate change on Meghalaya will be significant and could have far-reaching consequences for the state's economy, environment, and communities. It is essential to take action to mitigate the impacts of climate change and to adapt to the changes that are already occurring.

³Meghalaya State Climate Change Action Plan

2. Meghalaya – Focus on Climate Action

2.1 Meghalaya State Council on Climate Change & Sustainable Development

To address climate change - to reduce emissions, promote adaptation to the changes that are already occurring, and to build resilience, the State had constituted “**Meghalaya State Council on Climate Change & Sustainable Development**” as well as a Steering Committee with a mandate to:

- a. Evolve a coordinated response to issues relating to climate change at the State level
- b. Provide oversight for formulation of action plans in assessment, adaptation and mitigation of climate change
- c. Periodically monitor key policy decisions and their implementation status
- d. Any other function that may be deemed necessary by the Council from time to time.

The Meghalaya State Climate Change Action Plan was thus formulated to strategize adaptation and mitigation initiative towards emission stabilization and enhancing the livelihood resilience and adaptive capacity of the poor and vulnerable sections of the society.

2.2 Climate Action Budget

While the world is adopting targets to reduce the emission of Greenhouse Gases (GHG), the next challenge that arises is turning this commitment into funded and measurable actions. The Government of Meghalaya is integrating climate action into its budgeting process to ensure this commitment is met and also ensure the use of public resources effectively and efficiently to address one of the most significant challenges facing society today. The climate action budget can also increase transparency and accountability, as government will report on the effectiveness of its climate-related spending and adjust its plans as needed to meet its climate goals.

The **objectives** of a climate action budget are:

- to **allocate financial resources** towards activities that promote climate action, which include mitigating greenhouse gas emissions and adapting to the impact of climate change.
- to **set out plans for prioritizing and funding climate-related initiatives**, such as investing in renewable energy, improving energy efficiency, supporting public transportation, and skilling communities to protect natural ecosystems.
- to ensure that **public spending is aligned with climate objectives** and support the transition to a low-carbon and climate resilient economy.
- to **identify opportunities for cost savings**, through energy efficiency measures, and generate economic benefits, through job creation, carbon markets and innovation in green industries.

3. Process and methodology –Climate Action Budget

The process and methodology of the climate action budgeting consists of four-step process as illustrated in the figure below.

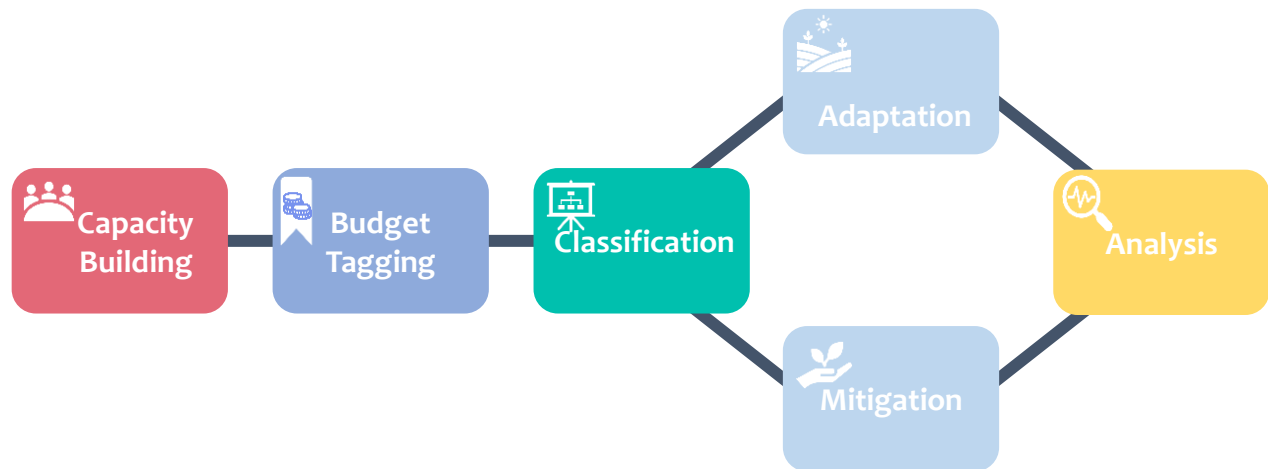

Figure 1 Climate Action Budget - Methodology

- 1) **Capacity Building on Climate Action:** Capacity Building of relevant department stakeholders on climate change, its impact and facilitating the re- alignment of the objectives of departmental schemes to achieve greater climate relevance in future.
- 2) **Budget tagging:** The budget team, in consultation with departments, identifies activities/ schemes/ programmes to understand the rationale of scheme, proportion of allocation to climate action and strengthen monitoring and tracking of climate- related expenditures in the State budget. This activity is expected to help policy makers incorporate climate considerations in project design.
- 3) **Classification:** The activities/ schemes/ programmes identified are then classified into two categories:
 - a. Climate change adaptation related activities
 - b. Climate change mitigation related activities
- 4) **Analysis** – Post consultation, the state budget is analyzed by the team to understand the fund allocation, trends etc.

4. Understanding Climate Action Budget for FY 2023-24

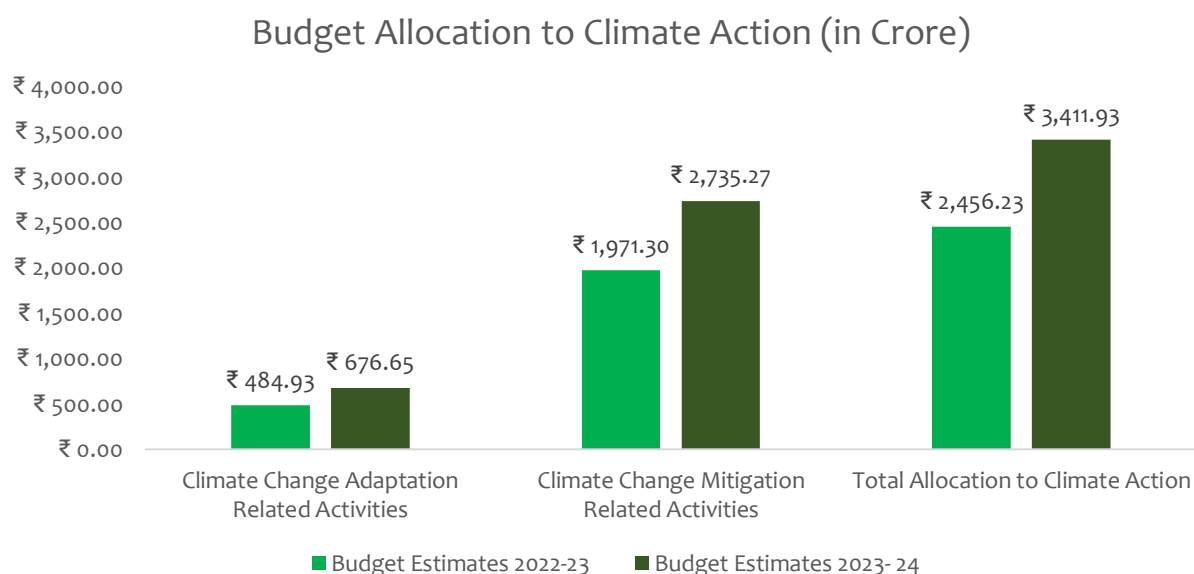

This section provides an overview of the climate action budget for the financial year 2023-24, allotment to various departments for climate action related programs and schemes, and details of climate action budget allocation.

The schemes/ programmes mapped in this budget are categorized into climate change adaptation and climate change mitigation related activities. The definition for the two categories is based on the Rio Marker definitions:

- Climate change adaptation:** An activity should be classified as related to climate change adaptation if it intends to reduce the vulnerability of human or natural systems to the current and expected impacts of climate change, including climate variability, by maintaining or increasing resilience through an enhanced ability to adapt to or absorb climate change stresses, shocks, and variability and/or a reduced exposure to them.
- Climate change mitigation:** An activity should be classified as related to climate change mitigation if it helps to stabilize greenhouse gas (GHG) concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system by promoting efforts to reduce or limit GHG emissions or to enhance GHG sequestration.⁴

4.1 Overview

The total budget allocated to climate action for Meghalaya has increased from Rs 2,456.23 crores in 2022-23 to Rs 3,411.93 crore in 2023-24 (budget estimates) constituting **15.36%** of the total State Budget for the FY 2023-24. Figure 2: Summary of Climate Action Budget FY 2023-22.

⁴Rio Marker Definitions of Climate Change Mitigation and Adaptation-Related Activities

With the State's economic activities more aligned towards agriculture and allied activities leading to low emission of Greenhouse Gases (GHGs), the State is able to prioritize climate change mitigation related activities as evident from its allocation. The rationale for selecting the department's schemes/programmes is given in the table below. The schemes and programmes are aligned to key priority areas in the Meghalaya State Climate Change Action Plan.

Annexure I provides the list of the sub head items identified and its classification along with the allocation and expenditure.

Table 1 List of Departments with rationale for including in the climate action budget

List of Departments	Rationale
Agriculture and Farmers' Welfare Department	• Agricultural zoning and capacity building of farmers • Capacity building to train farmers in latest cropping techniques specially evolved to counter adverse effects of climate change • Promotion of organic farming through usage of compost and vermin-compost • Increasing the area under perennial fruit plantation crops and low volume high value crops to help cope with uncertain weather patterns • Assessment of soil quality & soil moisture content for better productivity through generation of climatic information
Home (Police) Department	• Disaster Risk Reduction
Community & Rural Development Department	• Encourage continuance of existing community forests by way of giving inputs towards sustainable livelihood options • In convergence with MGNREGA, management of natural resources through VECs is being carried out. • Promotion of zero budget natural farming
Power Department	• Energy efficient Street Lighting • Facilitating overall village electrification • Promoting Energy Efficiency Practices in the State • Maximizing harnessing of Renewable Energy for the purpose of Power Generation
Fisheries Department	• Impact assessment of climate change on fishery and development of watershed vulnerable to climate variations
Forest Department	• Assessment of Afforestation-Reforestation for emission reduction and sustainable livelihood

	• Institutional capacity building, implementation and evaluation for forest development and management for climate change
Revenue & Disaster Management Department	• Disaster Risk Reduction
Department of Planning, Investment Promotion & Sustainable Development	• Increase plantation and ecological restoration on non-forest/ degraded forest land through different plantation and soil conservation programme • Study on Climate change impact on forest cover (Temperature and Rainfall regime) and indicative adaptation measures
Soil & Water Conservation Department	• Development of water management in minor irrigation through construction of check dams, rainwater harvesting and revival of existing water bodies as adaption measures
Transport Department	• Improve enforcement to control vehicular pollution
Water Resource Department	• Formulation of water use policy • Expansion of hydrometry network • Preparation and implementation of water management plan
PHE	• Solid liquid waste management
Urban Affairs	• Solid liquid waste management

4.2 Department-wise allocation

Table 2 Departments wise allocation to climate action budget

Departments	Climate Change Mitigation Related Activities (in Crore)	Climate Change Adaptation Related Activities (in Crore)
Community & Rural Development Department	₹ 1,121.75	-
Planning, Investment Promotion & Sustainable Development Department	₹ 671.24	-
Urban Affairs Department	₹ 246.53	-
Forest Department	₹ 237.57	₹ 7.08
Power Department	₹ 191.62	-
Soil & Water Conservation Department	₹ 69.69	₹ 194.67
Home (Police) Department	₹ 63.78	-
Public Health Engineering Department	₹ 61.26	-
Revenue & Disaster Management Department	₹ 37.80	₹ 128.24
Agriculture & Farmers' Welfare Department	₹ 28.14	₹ 157.85
Fisheries Department	₹ 3.34	-
Execution of Irrigation Schemes	₹ 2.29	-
Transport Department	₹ 0.25	-
Water Resources	-	₹ 188.81
Grand Total	₹ 2,735.27	₹ 676.65

From the table above, it can be inferred that Community & Rural Development majorly contributes (33%) to the budget with the works taken under MGNREGA aligned to management of natural resources. With all the EAPs under Planning, Investment Promotion & Sustainable Development Department focused on natural resource management through engagement of community to improve livelihood, this department contributes 20% of the total climate action budget and urban affairs department contributing 7%.

5. Climate Action specific schemes and programmes in Meghalaya

5.1 Community-based Forest Management and Livelihood Improvement in Meghalaya

Overview

The Community-based Forest Management and Livelihood Improvement in Meghalaya (MegLIFE) is a JICA (Japan International Cooperation Agency) assisted project to be implemented in the State of Meghalaya. The objective of the project is to restore and conserve natural resources within the villages by sustainable forest management, livelihood improvement, and institutional strengthening, thereby contributing to the conservation of the environment, biodiversity, and uplifting of socio-economic conditions of people in the State of Meghalaya. The project targets 500 villages in 22 blocks across all 11 districts of the state.

Outcomes / Expected outcome:

- Restoration of degraded forest areas
- Restoration of natural vegetation, barren land due to quarrying
- Improvement of corridors in the 500 targeted villages
- 1000 Self Help Groups to be supported for undertaking 22 enterprises in the project areas
- Promotion of Micro-credit activities, Income Generation Activities (IGAs) and Enterprise Development Activities

Budget allocated: ₹100 Crores

5.2 Community-Led Landscape Management Project (CLLMP)

Overview

The Meghalaya Community Led Landscape Management Project is a unique project of the State of Meghalaya, that seeks to leverage on the strength of the community to develop sustainable Natural Resource Management system that will lead to the restoration of degraded landscape of the state, build climate resilience and generate opportunities for livelihoods.

A unique feature of CLLMP is that it is entirely “Community-Driven” which means that planning and decisions to take up as well as implement interventions are done by the communities themselves. The project’s role is limited to facilitation and technical support including training and capacity building, provision of planning tools including GIS, Geospatial tech, equipment, social and environment safeguards etc.

The project is being supported by the Government of Meghalaya and World Bank and is implemented by the Meghalaya Basin Development Authority through its project implementation arm, the Meghalaya Basin Management Agency.

Objectives

- To manage and conserve natural resources through a holistic landscape approach
- To support accelerated economic growth and institutionalize and demonstrate a model for governments (both state and central) on community-led management of natural resources in the country.

Outcomes / Expected Outcomes

- Promotion of traditional knowledge, grass-root innovations and communication
- Strengthen communities through training and capacity building
- Promotion of landscape management principles through Catalytic Funds
- Preparation and implementation of Community Natural Resource Management (CNRM) Plan

Budget allocated: ₹90 Crores

5.3 Meghalaya Livelihoods and Access to Markets Project (Megha- LAMP)

Overview

The Megha-LAMP project is a flagship project co-funded by the International Fund for Agricultural Development (IFAD) and the Government of Meghalaya. The project seeks to build inclusive supply chains for agriculture, horticulture and forest produce. Further, it aims to develop credit and market linkages through farmer-based institutions called Village Cooperative Societies. Natural resource management is also a key element of the project and aims to enhance agricultural productivity through sustainable and community-based interventions. It is envisioned that the project improves farmer household incomes and their standards of living by promoting income generating activities.

Objectives

- To develop credit and market linkages through farmer-based institutions
- Community driven natural resource management

Outcomes / Expected Outcomes

- At least 50,000 households to adopt new livelihood opportunities linked to markets
- 540 villages to access services for enterprise development from government and private sector
- 1,200 villages with 90,000 households to implement Natural Resource Management Plans
- 20,000 households to report reduced time to collect domestic water
- 70% of Integrated Village Cooperative Societies (IVCS) to be financially sustainable and have loan recovery rates of at least 95%.

Budget allocated: ₹120 Crores

6. Way Forward

The people of Meghalaya, historically, has always had an intricate relationship with nature. This is evident from their Mariangiing or nature homes, the bamboo drip irrigation system and root bridges, to name a few, which are inspired by indigenous learning methods rooted in the community. The livelihood of the people is also deeply ingrained in the agrarian economy, thus making climate action a priority for the State. Climate change has been a serious issue that the world is dealing with as the effects of it are faced by everyone. Climate action budget is an important step that the State is taking in order to ensure the use of public resources effectively and efficiently to promote climate action, which includes mitigating greenhouse gas emissions and adapting to the impact of climate change. In the subsequent years, the State will be increasing the budget allocation from the present Rs 3,411.93 to protect the fragile ecology and the livelihood.

The State, through Externally Aided Projects, is currently implementing carbon offset projects that involve the implementation of sustainable land management practices, such as reducing deforestation, restoring degraded land, preserving its natural resources, or implementing conservation agriculture. With tourism booming in the State due to its natural bounty, it is crucial that the management of natural resources are community driven. This engagement of the community will not only preserve what the State has but provide an alternate livelihood avenue to the people.

For instance, the Community led Landscape Management Project (CLMMP) and the Community based Forest Management and Livelihood Improvement (Megh- LIFE) emphasizes on involving communities in sustainable natural resource management, improved livelihood and institutional strengthening thereby contributing to the conservation of the environment, biodiversity and uplifting the socio- economic condition of the people of the State.

Some of the steps taken by the Government in management of natural resources in the agriculture and mining sector are:

- a. **Agriculture:** To transition to organic farming, the Department of Agriculture and Farmers' Welfare is controlling the availability of fertilizers to protect the interest of small and marginal farmers who need time and capacity building to adapt to the newer practices. This move is taken to balance the imperative of environment protection and improving incomes and wellbeing of the farmers.
- b. **Mining:** Following the NGT ban on coal mining in the State, the Government is promoting scientific mining, and this is done through engagement of the local headmen and youths to create awareness on scientific mining as a means for sustainable mining. Besides this, the Department of Mining and Geology has obtained grant for prospecting licenses from the Ministry of Coal to commence scientific mining in the State.

Recognizing that the ownership of land and its resources belong to private landowners and communities, the Government of Meghalaya is currently incentivizing its communities through

payments for ecosystem services (PES) schemes, where landowners or communities receive financial incentives for maintaining or enhancing the ecological services provided by their land, such as carbon sequestration, water regulation, or biodiversity conservation. The State is looking to expand Green Meghalaya as this will add to the improvement of the socio- economic condition of the people.

Meghalaya forms a major carbon sink in the country and is crucial for India if it wants to achieve the commitment made at the Paris Agreement. With this in mind, the State is looking ahead to leveraging this surplus and monetize it in the carbon offset market, where companies, governments, or individuals purchase carbon credits or offsets to compensate for their greenhouse gas emissions. The State will be generating revenue by selling or trading the excess carbon sequestered or stored in natural or artificial carbon sinks, such as forests, wetlands, and soils, to offset carbon emissions from various sources.

Through these efforts, the State is looking forward to being the leader and set an example in climate change mitigation for the people and region.
